

Index card of culture of the *Bulbophyllum*

Bulbophyllum is represented in all regions and is presented as a rhizome bearing several pseudobulbs. These plants grow from the rock or bark of trees.

LIGHT :

plants appreciate a medium light exposure but without direct light.

TEMPERATURE :

De 10 to 22°C.

WATERING :

Regular and abundant during the growth of pseudo-bulbs and the least possible in winter for plants coming from region with dry season.

HUMIDITY :

Moisture must be kept average in all seasons.

FERTILIZER :

2 times no month from April to September

SUBSTRATE :

Fibers of ferns or any medium that holds moisture well but very draining, it is advisable to place a bed of pebbles or other under this wet layer in order to have good drainage.
